## Stock Management Health Check

### Health Check Overview

Stock management is a crucial part of any company's business, and having the right stock in the right place at the right time is critical for any warehouse or manufacturing operation.

The health check will analyse the physical stock handling against system operations and establish the integrity of the stock management system in place.

A review will also be undertaken to assess the most practical method of stock count, whether perpetual inventory methods are appropriate or a mixture of annual and weekly / monthly fast moving stock assessments.

OPS Logistics Consultancy Ltd (OPS) will provide an experienced consultant to review your company's stock management system. They will compare your company's current modus operandi against your business requirement, industry standards and provide suggestions for alternative methodologies.

At the end of the Health Check, a high-level report will be produced covering:

- Executive Summary
- List of source information
- List of assumptions and risks
- Overview of current operational methodologies
- Comparison against industrial standards
- Best-in-Class operational practices
- Areas for improvement
- Alternative methodologies
- Potential savings

### Health Check Benefits

The Company's management will have a single view of their stock management operation and cost. The information provided will enable management to make intelligent and informed decisions on the way forward.

### Prerequisites of Health Check

In order to provide a meaningful report within such a confined period of time (Two days), there are a number of things the customer will need to provide before the start of the engagement:

- Overview of current stock handling
- Stock management reports
- Message to key stakeholders concerning review to enable buy-in
- List of key stakeholders and contact details

### Price

A fixed cost of £1,200, excluding VAT and expenses. This provides for no hidden surprises.
